

# Sanitary Sewer Modifications Project

## PROJECT UPDATE

4/13/15

Due to harsh winter conditions, substantial settlement is still being observed in the pipe trench areas in various locations in the Township. Therefore, milling and final paving of the roads where the pipeline was installed has been delayed until June at the earliest, in order to allow more time for the trenches to settle. The roads will remain under observation, and temporary pavement repairs will continue as necessary to keep the roadways safe. In the meantime, repairs to catch basins and the road base outside of the trench area by the Chatham Township Department of Public Works will be ongoing.

Further notification will be provided as soon as the specific paving dates are known. Please continue to consult the Township website for further information. Thanks for your patience and cooperation!
